Vim Cheat Sheet

vim Cheat Sheet			
Global	Editing	Macros	Working with multiple files
:h[elp] keyword - open help for keyword	r - replace a single character	qa - record macro a	:e[dit] file - edit a file in a new buffer
:sav[eas] file - save file as	J - join line below to the current one with one space in between	q - stop recording macro	:bn[ext] - go to the next buffer
:clo[se] - close current pane	gJ - join line below to the current one	@a - run macro a	:bp[revious] - go to the previous buffer
:ter[minal] - open a terminal	without space in between	@@ - rerun last run macro	:bd[elete] - delete a buffer (close a file)
window	gwip - reflow paragraph	Cut and paste	:b[uffer]#-go to a buffer by index #
\boldsymbol{K} - open man page for word under the cursor	g∼ - switch case up to motion	yy - yank (copy) a line	:b[uffer] file - go to a buffer by file
	gu - change to lowercase up to motion	2yy - yank (copy) 2 lines	:ls or :buffers - list all open buffers
Cursor movement h - move cursor left	gU - change to uppercase up to motion	yw - yank (copy) the characters of the word from the cursor position to the start of the next word	:sp[lit] file - open a file in a new buffer and split window
i - move cursor down	CC - change (replace) entire line		:vs[plit] file - open a file in a new buffer and vertically split window
k - move cursor up	C - change (replace) to the end of the line	y\$ - yank (copy) to end of line	:vert[ical] ba[ll] - edit all buffers as vertical windows
l - move cursor right	C\$ - change (replace) to the end of the line	${f p}$ - put (paste) the clipboard after cursor	:tab ba[ll] - edit all buffers as tabs
H - move to top of screen		P - put (paste) before cursor	Ctrl + ws - split window
M - move to middle of screen	Ciw - change (replace) entire word	dd - delete (cut) a line	Ctrl + wv - split window vertically
L - move to bottom of screen	CW - change (replace) to the end of the word	2dd - delete (cut) 2 lines	Ctrl + ww - switch windows
W - jump forwards to the start of a word	S - delete character and substitute text	dw - delete (cut) the characters of the word from the cursor position to the start	Ctrl + wq - quit a window
W - jump forwards to the start of a word	S - delete line and substitute text (same as	of the next word	Ctrl + wx - exchange current window with next one
ords can contain punctuation)	cc)	D - delete (cut) to the end of the line	Ctrl + w= - make all windows equal height & width
e - jump forwards to the end of a word	xp - transpose two letters (delete and paste)	d\$ - delete (cut) to the end of the line	Ctrl + wh - move cursor to the left window (vertical split)
E - jump forwards to the end of a word (words can contain punctuation)	u - undo	X - delete (cut) character	Ctrl + wl - move cursor to the right window (vertical split)
b - jump backwards to the start of a word	U - restore (undo) last changed line	Indent text	Ctrl + wj - move cursor to the window below (horizontal split)
B - jump backwards to the start of a word	Ctrl + r - redo	>> - indent (move right) line one shiftwidth	Ctrl + wk - move cursor to the window above (horizontal split)
(words can contain punctuation)	- repeat last command	<< - de-indent (move left) line one	Diff
% - move to matching character (default supported pairs: '()', '{}', '[]' - use: h	Marking text (visual mode)	shiftwidth	${f z}{f f}$ - manually define a fold up to motion
matchpairs in vim for more info)	V - start visual mode, mark lines, then do a command (like y-yank)	>% - indent a block with () or {} (cursor on brace)	zd - delete fold under the cursor
$oldsymbol{0}$ - jump to the start of the line	V - start linewise visual mode	>ib - indent inner block with ()	za - toggle fold under the cursor
^ - jump to the first non-blank character of the line	• start mewise visual mode • move to other end of marked area	>at - indent a block with <> tags	ZO - open fold under the cursor
\$ - jump to the end of the line	Ctrl + v - start visual block mode	3== - re-indent 3 lines	ZC - close fold under the cursor
g jump to the last non-blank character of the line	0 - move to other corner of block	=% - re-indent a block with () or {} (cursor	zr - reduce (open) all folds by one level
	aw - mark a word	on brace)	Zm - fold more (close) all folds by one level
$\boldsymbol{g}\boldsymbol{g}$ - go to the first line of the document	w - mark a word	= iB - re-indent inner block with {}	

	ab - a block with ()	ag-6 no indept entire buffer	
G - go to the last line of the document		gg=G - re-indent entire buffer	
5gg or 5G - go to line 5	aB - a block with {}] p - paste and adjust indent to current line	
f x - jump to next occurrence of character x	at - a block with <> tags	Exiting	
tx - jump to before next occurrence of	ib - inner block with ()	: W - write (save) the file, but don't exit	
character x	iB - inner block with {}	:w !sudo tee %-write out the	
Fx - jump to previous occurence of character x	it - inner block with <> tags	current file using sudo	
	Esc - exit visual mode	: wq or : x or ZZ - write (save) and quit	
Tx - jump to after previous occurence of character x	Visual commands > - shift text right	: q - quit (fails if there are unsaved changes) : q! or ZQ - quit and throw away unsaved changes	
; - repeat previous f, t, F or T movement			
, - repeat previous f, t, F or T movement,	< - shift text left		
backwards	y - yank (copy) marked text	:wqa - write (save) and quit on all tabs	
} - jump to next paragraph (or function/block, when editing code)	d - delete marked text	Search and replace	
{ - jump to previous paragraph (or	~ - switch case	/pattern - search for pattern	
function/block, when editing code)	u - change marked text to lowercase	?pattern - search backward for	
ZZ - center cursor on screen	U - change marked text to uppercase	pattern	
Ctrl + e - move screen down one line (without moving cursor)	Registers	\vpattern - 'very magic' pattern: non- alphanumeric characters are interpreted as special regex symbols (no escaping needed)	
·	:reg[isters] - show registers		
Ctrl + y - move screen up one line (without moving cursor)	content	n - repeat search in same direction	
Ctrl + b - move back one full screen	" xy - yank into register x	N - repeat search in opposite direction	
Ctrl + f - move forward one full screen	" xp - paste contents of register x	:%s/old/new/g - replace all old with new throughout file :%s/old/new/gc - replace all old with new throughout file with confirmations	
Ctrl + d - move forward 1/2 a screen	"+y - yank into the system clipboard		
Ctrl + u - move back 1/2 a screen	"+p - paste from the system clipboard register		
Insert mode - inserting/appending text			
i - insert before the cursor	Marks and positions	:noh[lsearch] - remove highlighting of search matches	
I - insert at the beginning of the line	:marks - list of marks		
a - insert (append) after the cursor	ma - set current position for mark A	Search in multiple files	
	`a - jump to position of mark A	:vim[grep] /pattern/ {`{file}`}-search for pattern in	
A - insert (append) at the end of the line	y`a - yank text to position of mark A	multiple files	
O - append (open) a new line below the current line	0 - go to the position where Vim was	:cn[ext] - jump to the next match	
0 - append (open) a new line above the	previously exited	:cp[revious] - jump to the previous	
current line	'" - go to the position when last editing	match	
ea - insert (append) at the end of the word	this file	: cope[n] - open a window containing the list of matches	
Ctrl + h - delete the character before	go to the position of the last change in this file		
the cursor during insert mode	`` - go to the position before the last	:ccl[ose] - close the quickfix window	
Ctrl + W - delete word before the cursor	jump Tabs		
during insert mode	:ju[mps] - list of jumps		

zi - toggle folding functionality
]c - jump to start of next change
[c - jump to start of previous change
do or :diffg[et] - obtain (get) difference (from other buffer)
dp or :diffpu[t] - put difference (to other buffer)
:diffthis - make current window part of diff
:dif[fupdate] - update differences
:diffo[ff] - switch off diff mode for current window

Ctrl + j - begin new line during insert mode	Ctrl + i - go to newer position in jump list	:tabnew or:tabnew {page.words.file} - open a file
Ctrl + t - indent (move right) line one shiftwidth during insert mode	Ctrl + o - go to older position in jump list	in a new tab Ctrl + wT - move the current split
Ctrl + d - de-indent (move left) line one	: changes - list of changes	window into its own tab
shiftwidth during insert mode		gt or :tabn[ext] - move to the next tab
Ctrl + n - insert (auto-complete) next match before the cursor during insert mode	g; - go to older position in change list	gT or :tabp[revious] - move to
	Ctrl +] - jump to the tag under cursor	the previous tab
Ctrl + p - insert (auto-complete) previous match before the cursor during		#gt - move to tab number #
insert mode		:tabm[ove] #- move current tab to the #th position (indexed from o)
Ctrl + rx - insert the contents of		
register x ESC - exit insert mode		: tabc[lose] - close the current tab and all its windows
ESC - eart misert mode		: tabo[nly] - close all tabs except for the current one
		: tabdo command - run the command on all tabs (e.g. : tabdo q - closes all opened tabs)
